

### **First step:**

You have to click on play in order to start the game. When you click on play it should take you to a different window and there should be a grid of white circles with 7 columns and 6 rows.

If you click quit, then the game will close.

### **Second Step:**

To start playing, you have to click on a circle to start. When you click for the first time that player becomes the first player automatically, therefore the first players always becomes BLUE.

Now, when the second player clicks on a circle, they becomes grey.

### **ThirdStep:**

Now, you have to try to win and get 4 chips or discs in a row whether its diagonal, horizontal , vertical.

### **Fourth Step:**

If player 1 wins, a pop out screen should pop out and it should have the title of the game(CONNECT4). It should also display if player one or player two won.

### **Fifth Step:**

The pop out winning screen should also have an exit button at the bottom and you have to click on it to exit the game.

### **Sixth step:**

To play again you have to run my game again. Therefore that's how you approach my connect four game and ENJOY. :)
